Re: Supplemental Ex Parte Statement

Review of Local Radio Ownership Rules - Embedded Radio Markets

MB Docket Nos. 09-182 and 14-50

Dear Ms. Dortch:

Connoisseur Media, LLC ("Connoisseur") hereby submits the attached supplemental documentation as a follow up to several meetings with Commission personnel on May 4, 2017 to discuss the above-referenced matter. During each of these meetings, Connoisseur and its counsel addressed the issues that it has pursued throughout the above-referenced proceeding: changing the treatment under the Commission's multiple ownership rules of radio stations that are home to embedded markets in major metropolitan areas. This supplemental documentation provides additional information about those markets embedded into the Washington DC parent market. In the May 4 meetings, Connoisseur noted that the Commission in the Second Report and Order faulted Connoisseur because Connoisseur had not included data about the markets embedded in the Washington, DC market in addition to the substantial information that Connoisseur had provided with respect to the embedded markets in the New York parent market, where it currently owns stations. Connoisseur committed to supplement the record to include this information, and it is provided with this letter.

In connection with the documentation that Connoisseur provided with respect to the New York embedded markets, it demonstrated several facts. These included:

• The markets were considered embedded because the residents of these markets had some commonality of interest with the central market, not because these residents had any commonality with the other embedded markets. To demonstrate that this was the case, Connoisseur looked at commuting patterns and demonstrated that residents of the

- embedded markets commuted to the core of the parent market, but rarely commuted to other embedded markets to work.
- Listeners to the radio in embedded markets listened to radio stations from the core of the parent market, but rarely listened to radio from the other embedded markets.
- Core market stations provided technical coverage of much of the population of the embedded markets, but stations in the embedded markets did not provide significant coverage of the overall parent market.
- Embedded market stations did not achieve any significant listenership in the larger parent market and, even if all of the embedded market stations were owned by one party (which would be impossible as that level of concentration would be prohibited in the embedded markets), that party's total audience share would be about half that of the major group owners in the parent market.

The attached documentation shows that these same observations can be made with respect to the stations in the DC parent market. Radio stations based in Frederick, Maryland do not compete with stations in Fredericksburg, Virginia (the two embedded markets within the DC market), and that stations home to Frederick and Fredericksburg are not significant competitors in the core of the DC market. Specifically, Connoisseur's showings in the attached documents include:

- Commuting patterns demonstrating that, according to the U.S. Census Data, there is almost a total absence of commuters who travel to work from one embedded market to another. In fact, the overwhelming majority of residents in Frederick work either in Frederick or in the DC "core" market. Likewise, the vast majority of residents in Fredericksburg work either in Fredericksburg or in the DC core market. Virtually no residents of Frederick commute for work to Fredericksburg, and the same is true for residents of Fredericksburg who commute for work to Frederick. This data demonstrates that, while there is a commuting and economic link between the embedded market and the core market, those links are absent between the embedded markets themselves. (See Page E-2 attached).
- Listener data showing that listeners in embedded markets are most likely to tune in to stations located either in their own embedded market or in the core market. For example, according to recent Nielson data, over 90% of listeners in Frederick listen to stations located in either their home market or the core market (46% and 46.3%, respectively). The same is true of listeners in Fredericksburg, with 57% listening to stations in the home market and 35% listening to stations in the core market. (See Page E-3 attached) According to this Nielsen data, the FM stations in Frederick have

¹ There are only four parent markets with embedded markets, and only in New York and Washington DC are there multiple embedded markets where the issue raised by Connoisseur arises.

absolutely no listening in Stafford County, the single county in the Fredericksburg market that is embedded in the DC market, and the FM stations in Fredericksburg have absolutely no listening in Frederick. (See Page E-7).

- Ratings data demonstrating that if a broadcaster were to own every one of the 10 stations home to embedded markets considered part of the DC parent market, that owner would still only be in 6th in the parent market, with only a 5% audience share. (See Page E-5). While such aggregation of embedded market stations would be impossible for various reasons, including primarily that the this level of ownership would exceed the audience caps in each of the embedded markets, this demonstrates that aggregated embedded market stations cannot lead to any competitive imbalance in the parent DC market.
- Data demonstrates that this poor ratings showing in the greater DC parent market is not because of programming, but instead because of coverage. The FM station in the embedded markets with the greatest coverage of the overall DC parent market covers but 23% of the population of that market with a 1 mv/m signal, and the rest of the FM embedded market stations in Frederick and Fredericksburg cover 15% or less of the population of the parent market. (See Page E-7). In contrast, all but 2 of the stations in the core of the DC market cover more than 68% of the population (with most covering far more), and only one covers less than 50% of the market's population, and it has the lowest ratings of those core stations. (See Page E-6).

As Connoisseur has previously explained, there is no reason for preventing an owner of stations in one embedded market from owning stations in another embedded market simply because the total ownership in the parent market would be numerically more than an owner is allowed to hold in that parent market. These embedded market stations simply are not currently, and will never be, competitive threats in the parent market. Nor do they compete with each other. The data for the DC market support the same conclusion as the data previously submitted from the NY market – while the stations licensed in the core of the market may compete in the embedded markets (and the ownership of stations in the embedded markets can justifiably be attributed to an owner of stations in the core of the parent market), there is no justification whatsoever for preventing an owner of stations in one embedded market from acquiring stations in another embedded market.

The FCC must either exempt from the dual multiple ownership analysis, or adopt a presumption that the dual analysis need not be conducted as long as some objective test demonstrates that a station's designation as "home" to an embedded market is not in some way disguising a station that really is competitively serving the greater parent market in the manner

Marlene H. Dortch, Secretary June 6, 2017 Page 4

that those stations home to the core of the parent market do. ² Connoisseur has suggested either a presumptive waiver of the rules for an owner of stations home to embedded market which that owner seeks to acquire stations in other embedded markets, or the reliance on the "contour method" used in the nonrated markets to show that a combination does not propose a competitive threat in the greater parent market. The NAB has suggested that if an embedded market station does not place coverage contour over 50% of the parent market, it should not also count in a multiple ownership analysis of the parent market when evaluating combinations between stations in different embedded markets. Connoisseur supports the NAB suggestion as few embedded market stations come close to serving any substantial portion of the parent market. Whether it be one of Connoisseur's proposals or NAB's proposal, an objective standard is needed to ensure that parties can do acquisitions in embedded markets to improve the competitive posture of stations in those markets. A case-by-case approach results in too much market uncertainty and harms the market.

Connoisseur hopes the data submitted today addresses the last of the Commission's concerns in this matter, and looks forward to a swift decision on its petition for reconsideration. Should there be any questions concerning this matter, please contact the undersigned.

Enclosure

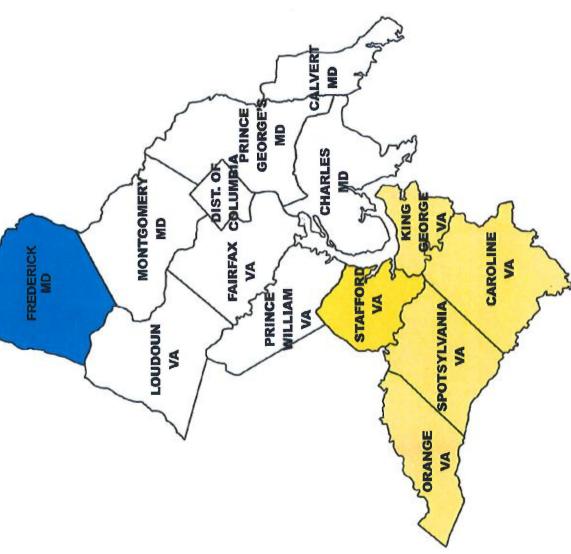

² In its comments filed in the Quadrennial Review, Connoisseur first advanced this position. In the August order resolving the Quadrennial Review, the Commission refused to acknowledge that the dual consideration did not serve the public interest. The Commission instead suggested that waivers could be approached on a case-by-case basis, but provided no standards under which those waivers would be judged. Connoisseur sought reconsideration of that decision.
